5. The following is an examiner's statement of reasons for allowance:

Regarding claims 79 and 81-93, the prior art fails to disclose or make obvious a method, performed by one or more server devices comprising, in addition to the other recited features of the claim, the steps of storing search query-search document associations, each search query-search document association representing a one-to-one pairing of an issued search query and a

search document retrieved based on the issued search query; receiving a search query; identifying a set of search result documents using the received search query; forming, by one or more processors of the one or more server devices, a plurality of clusters of search documents, of the stored search query-search document associations, that match the identified set of search result documents; selecting at least one of the plurality of clusters; and formulating a search query refinement suggested based on an issued search query of a search query-search document association associated with a search document of the selected at least one of the plurality of clusters in the manner recited in claim 79.

Regarding claims 94 and 123-124, the prior art fails to disclose or make obvious a system comprising, in addition to the other recited features of the claim, means for storing search query-search document association in a memory, each search query-search document association representing a one-to-one pairing of a stored search query and a search document retrieved based on the stored search query; means for receiving a search query; means for identifying a set of search result documents using the received search query; means for forming a plurality of clusters of search documents, of the search query-search document associations, that are associated with the identified set of search result documents; means for selecting at least one of the plurality of clusters; and means for forming a refinement suggestion based on a stored search query associated with a search document of the selected at least one of the plurality of clusters in the manner recited in claim 94.

Regarding claims 95 and 118-119, the prior art fails to disclose or make obvious a computer-readable memory device to store instructions executable by at least one processor to cause the at least one processor to, in addition to other recited features of the claim, store search

query-search document association, each search query-search document association representing a one-to-one pairing of an issued search query and a search document retrieved based on the issued search query; receive a search query; identify a set of search result documents using the received search query; form a plurality of clusters of search documents, of the stored search query-search document associations, that are associated with the identified set of search result documents; select at least one of the plurality of clusters; and formulate a search query refinement suggestion based on an issued search query associated with a search document of the selected at least one of the plurality of clusters in the manner recited in claim 95.

Regarding claims 96 and 98-110, the prior art fails to disclose or make obvious a method comprising, in addition to other recited features of the claim, the steps of storing, in a memory of the one or more server device, a plurality of query-document associations, each query-document association including a one-to-one pairing of an issued search query and a stored search document that was retrieved based on the issued search query; receiving a search query; identifying a set of search result documents using the received search query; identifying search result documents that match stored search documents; forming a plurality of clusters of the search documents, of the stored plurality of query-document associations, that match the search result documents; selecting at least one of the plurality of clusters, identifying for a stored search document; formulating a search query refinement suggestion for the received search query based on an issued search query of the identified query-document association in the manner recited in claim 96.

Regarding claims 111 and 125-126, the prior art fails to disclose or make obvious a system comprising, in addition to other recited features of the claim, means for storing a plurality

of query-document associations, each query-document association including a one-to-one pairing of a search query and a search document retrieved based on the search query; the recited receiving means; means for identifying a set of search result documents using the received search query; means for identifying search result documents in the identified set of search result documents that match one or more of the stored search documents; means for forming a plurality of clusters based on the stored search documents that match search result documents in the identified set of search result documents; means for selecting at least one of the plurality of clusters; means for identifying a search document of the selected at least one of the plurality of clusters, a search query of a query-document association of the plurality of query-document associations that corresponds to the identified search result document; and means for formulating a search query refinement suggestion for the received search query based on the identified search query in the manner recited in claim 111.

Regarding claims 112-115, the prior art fails to disclose or make obvious a method, performed by one or more server devices, comprising, in addition to other recited features of the claim, the steps of creating a query source reference, including identifying associations between issued search queries and retrieved search documents in a one-to-one relation, and assigning a weight to each of the associations; receiving a search query; forming a plurality of clusters based on the query source reference; selecting at least one of the plurality of clusters; and formulating a refinement suggestion for the received search query using the at least one of the plurality of clusters in the manner recited in claim 112.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
